

About Us

BPS is a pioneer brand in service industry having a huge client base. Established in 2013, we always kept our client's need in priority and always proactively responded to our clients with best of our services. BPS entered into IT industry with vision of providing best solutions for client's while keeping in mind to provide solutions that suits their pocket too.

Our Patrolling app

BPS has developed a unique mobile app for keeping track of security guards /staff on real-time via GPS with real-time remark marking facility. This app is a great advantage for Management/Adiministrator persons to keep track of their field staff. You can watch all your location/clients sitting in your office/home via mobile app and can take required actions on that.

Process of work on App.

BPS Patrolling App is a real-time online guard tour system based on QR-code tags. The staff scans tags placed on locations and assets and the Admin gets informed in real-time about incidents and events. Any time a QR-code is scanned, the information is sent to the BPS Patrol Web application via a cloud server and the staff takes immediate control on buildings and locations wherever necessary.

Dashboard Each guard conducting a guard tour is armed

with a unique technology. He can now manage all of his work via his smart phone and complete guard tours in total control of occurring incidents. Inspections and guard tours are enhanced with the ability to attach incident images, incident reports, etc. In addition, the security staff (security guards, workers etc.) can inform immediately their reporting who are responsible for monitoring assets and locations about any incident or unwanted activities. This App can be used for keeping track of Workers also by random checking's.

All kinds of assets and buildings, ranging from

Reports

departments, locations, warehouses to transportation areas, airports, stores and remote areas can be set under total control as reporting officer and staff can handle a bunch of information for any location/client just from one location. Admin / Reporting Officer will get any update provided by Guard/Staff immediately on his App, so that he can take preventive measures and remain updated about the site/location. Images uploaded by guard/staff while patrolling can be used for reference and evidences.
